

SOPHIA J. HOLLICK

Facultad de Ciencias, C. de Pedro Cerbuna, 12, Zaragoza, Spain 50009
sophia.hollick@yale.edu — +34 641 329 344

EDUCATION

Yale University

PhD Physics

en route Masters of Physics

Advisor: Dr. Reina H. Maruyama

May 2025

Rensselaer Polytechnic Institute

B.S. Physics *Summa Cum Laude*

May 2020

GPA: 3.98/4.0

RESEARCH EXPERIENCE

Postdoctoral Research Associate

IAXO, RADES, and ANAIS-112

Universidad de Zaragoza

June 2025–June 2026

- ANAIS-112, located in Canfranc, Spain, was built to test the DAMA/LIBRA dark matter claim. After concluding this debate with a full 6 year dataset and combined search with COSINE-100 (my thesis), further dark matter searches can be performed. I am leading the analysis for the axion and solar particle search with the ANAIS data. Further searches for boosted dark matter and other exotic models are also being considered.
- IAXO, the International AXion Observatory, is a solar axion experiment utilizing micromegas readouts whose data are structured with REST (the Rare Event Search Toolkit), a ROOT-based framework. RADES is a haloscope, cavity experiment. Though RADES has achieved physics results in past iterations, future work with IAXO has motivated the collaboration to implement the analysis chain into the REST software. Because cavity experiments utilize a very different experimental setup than the micromegas detectors, this implementation is expected to be almost completely separate from the existing REST framework.

Visiting Graduate Student Researcher

COSINE-100 and ANAIS-112: Combined Dark Matter Search

Universidad de Zaragoza

September 2023–May 2025

- ANAIS-112, located in Canfranc, Spain, is the sister experiment to COSINE-100. The final years of my PhD were spent in Spain to facilitate a combined search for dark matter between these two experiments where my analysis found a statistically significant exclusion of the DAMA/LIBRA signal claim.
- Additionally, I conducted analysis studies on the ANAIS-112 background model and found that a substantial difference in fine-tuning between performing fits with ROOfit and Markov-Chain Monte Carlo (MCMC) can be realized. Due to difficulty modeling the low energy region, the MCMC is useful for understanding which particular components are behaving poorly.

Particle Physics Graduate Student Researcher

COSINE-100: Dark Matter Direct Detection

Yale University

June 2021–May 2025

- COSINE-100 is a collaboration between the DM-Ice and KIMS experiments where NaI(Tl) detectors are used in order to perform a model-independent test of the DAMA/LIBRA experiment who claim to observe a dark matter signal taking the shape of an annual modulation as expected from standard halo model dark matter.
- R&D efforts for optimizing radiopurity in next generation NaI(Tl) detectors by measuring their cosmogenic activation rates with artificially activated NaI(Tl) crystals were investigated to understand their impact on the dark matter search.

- A replication of the DAMA/LIBRA background subtraction procedure was performed on COSINE-100 data and on simulated DAMA/LIBRA data (from COSINE-100 known backgrounds) to show analysis artifacts influencing the final modulation signal as resulting from time-dependent backgrounds.
- Varying geometries for the proposed COSINE-200 experiment were simulated in GEANT4 to study the variations in the NaI(Tl) crystal backgrounds. Crystals with smaller surface areas were observed to yield less active backgrounds as ^{210}Pb is a common contaminant on the crystal surface.

Science Undergraduate Laboratory Internship

Brookhaven National Laboratory

Nuclear Data Analysis

Fall 2019 and Summer 2020

- Developed Decision Tree Machine Learning algorithms with the National Nuclear Data Center (NNDC).
- Developed Python program for determining spacing of nuclear level densities with reliable uncertainty of any given nucleus in The Atlas of Neutron Resonances by testing a variety of mathematical models on the structure of the nucleus' cumulative level distribution.
- Computed D-spacings by l and j spin groups

Plasma Physics Research Intern

University of New Hampshire

Solar Wind Data Analysis from Voyager I and II Spacecrafts

Spring 2016 – Summer 2018

- Created a library of pick-up ion wave events in the form of a detailed database and wrote a series of programs to extract information about the solar wind environment, position in space, and event duration timescale.

INSTRUMENTATION AND ANALYSIS EXPERIENCE

Hamamatsu Photomultiplier Tubes (PMT)

NaI(Tl) Crystal Scintillator Detectors

CAEN Digitizers

Data Analysis with ROOT, PyMC, C++

GEANT4 Simulations

ISO7 Clean Room Experience

Machine Learning with Decision Tree Techniques

TEACHING AND MENTORING EXPERIENCE

Advanced Physics Laboratory (PHYS 382L)

Fall 2021 - Spring 2023

Teaching Fellow, Department of Physics, Yale University

Introductory Physics Laboratory 2 (PHYS 166L)

Spring 2021

Teaching Fellow, Department of Physics, Yale University

Introductory Physics Laboratory 1 (PHYS 165L)

Fall 2020, Fall 2022

Teaching Fellow, Department of Physics, Yale University

Star, Galaxies, and the Cosmos (ASTR 1520)

Spring 2019

Teaching Assistant, Department of Physics, Rensselaer Polytechnic Institute

Advising and Learning Assistance Center (ALAC) Tutor

Fall 2018 - Summer 2019

Rensselaer Polytechnic Institute

I-PERSIST Honors Physics Mentor

Fall 2018

Department of Physics, Rensselaer Polytechnic Institute

Research Mentor

Summer 2018

Space Science Center, University of New Hampshire

Study of solar wind and data analysis from Ulysses, Voyager, and ACE spacecraft.

GRANTS, HONORS, AND AWARDS

COST Action COSMIC WISPer 3rd Training School Best 3 Students Presentations Prize	2025
International Workshop for Identification of Dark Matter (IDM) Young Scientist Support Grant	2024
Winner of Yale's Leigh Page Prize	2020
Winner of the RPI Physics Dept. G. Howard Carragan Award	2020
Inductee of National Society of Physics Students (Sigma Pi Sigma)	2020
Dean's Honor List at RPI	Fall 2017 - Spring 2020
Rensselaer Medalist Recipient	Fall 2016

ACADEMIC AND UNIVERSITY SERVICE

WIDG Seminar Coordinator	Fall 2022 - Spring 2023
<i>Department of Physics, Yale University</i>	

- Weak Interaction Discussion Group Talks (WIDG) is a biweekly seminar held at Yale's Wright Lab. Topics include Cosmology, Nuclear, Particle, Neutrino, AMO, and Theoretical Physics. The seminar is open to all members of the Yale Physics community. Coordinators invite speakers, host the talks, and work with Wright Lab admins to make their necessary arrangements and advertise the seminars.

Graduate Student Ambassador	Spring 2022
<i>Department of Physics, Yale University</i>	

- Ambassadors help recruit new students by reaching out to accepted graduate students via email. They also assist in the open house events for the graduate physics school.

Graduate Student Advisory Committee (GSAC)	2022
<i>Department of Physics, Yale University</i>	

- GSAC advises the Chair, the Director, and other faculty on matters related to graduate students and the graduate program, including helping plan and organize annually scheduled events. Committee members are appointed for one calendar year.

SCIENTIFIC OUTREACH

Centro de Astropartículas y Física de Altas Energías (CAPA)	October 31, 2023-24
<i>Dark Matter Day</i>	

- “Niños y mayores están invitados a participar para aprender sobre la materia oscura realizando una serie de pruebas en la Facultad de Ciencias, incluyendo una observación astronómica con telescopios a partir de las 20:30h.” An open house day for the general public to come to the physics department at the University of Zaragoza to discover Dark Matter. Hosted in Spanish, I worked at reception, signing in guests and directing them to event locations.

Laboratorio Subterráneo Canfranc (LSC)	September 24, 2023
<i>LSC Open Day 2023</i>	

- “The LSC organises an annual open day for individuals interested in visiting our facilities. This day is usually held on a Sunday during autumn.” Workshops, lectures, and demonstrations of detection techniques for adults and children are offered with no registration required. Open Day is held in Spanish and I assisted with the particle physics and dark matter workshop.

Girls Advancing in STEM (GAINS)	2022
<i>GAINS Conference 2022</i>	

- “GAINS inspires and empowers high school girls to envision, prepare for, and pursue academic and professional futures in STEM.” The GAINS conference in 2022 was hosted by Wright Laboratory at Yale. I lead an in-depth lab tour which guided the students through my work as well as the work of fellow lab

mates and entertained the student's curiosity by answering their questions and sharing some results from our research studies.

PROFESSIONAL ORGANIZATIONS

CA21106 COSMIC WISPer in the Dark Universe: Theory, astrophysics and experiments	2025 – Present
CAPA Centro de Astropartículas y Física de Altas Energías	2023 – Present
SACNAS Society for the Advancement of Chicanos and Native Americans in Science	2022 – 2023
American Physical Society	2020 – 2023
Sigma Pi Sigma (National Physics Honors Society)	Inducted 2020
Women in Physics	2017 – Present
Society of Physics Students	2017 – 2020

SKILLS

Computational skills:

ROOT, C++, Python, FORTRAN, LaTeX, Jupyter Notebook, Microsoft Office, Linux, Mac & Windows OS

Extracurriculars:

Digital/Traditional Art, Guitar&Piano, and Video Editing.

Languages:

English, Spanish(C1), German(B1).

CONFERENCES & TALKS

Invited Talks

1. ***A combined search for dark matter with COSINE-100 and ANAIS-112***
DESY Experimental Particle Physics Seminar
Hamburg, Germany 16 October 2025
2. ***Searching for Dark Matter with COSINE-100***
Online Seminar for Topics in Particle Physics
Tennessee, United States 8 October 2024
3. ***Searching for Dark Matter with COSINE-100***
Saturnalia 2023
<https://indico.capa.unizar.es/event/35/contributions/532>
Zaragoza, Spain 18-21 December 2023
4. ***COSINE-100 and ANAIS-112 Search for WIMPs***
WIDG Seminar at Yale
New Haven, Connecticut 28 November 2023
5. ***Searching for Dark Matter with the COSINE-100 Experiment***
20th MultiDark Workshop
<https://workshops.ift.uam-csic.es/multidarkgandia/program>
Gandía, Spain 25-27 October 2023
6. ***Searching for Dark Matter with COSINE-100***
Seminar at Universidad de Zaragoza
Zaragoza, Spain 10 October 2023
7. ***Observations of Low-Frequency Magnetic Waves due to Newborn Interstellar Pickup Ions Using ACE, Ulysses, and Voyager Data*** (presented by C. W. Smith)
16th Annual International Astrophysics Conference 2017
Santa Fe, CA March 2017.

Contributed Talks

1. ***“A combined search for dark matter with COSINE-100 and ANAIS-112”***
3rd Training School COSMIC WISPerS (CA21106)
Awarded Best 3 Students’ Presentations Prize
<https://indico.in2p3.fr/event/35550/contributions/161708/>
Annecy, France 16 September - 19 September 2025
2. ***“A combined search for dark matter with COSINE-100 and ANAIS-112”***
21st MultiDark
<https://indico.ifca.es/event/3186/contributions/15754/>
Santander, Spain 9 October - 11 October 2024
3. ***“Combined analysis of COSINE-100 and ANAIS-112”***
9th COSINE Collaboration Meeting 2024
Chung-Ang University, Seoul, Korea 20 August - 22 August 2024
4. ***“A combined search for dark matter with COSINE-100 and ANAIS-112”***
IDM 2024
<https://agenda.infn.it/event/39713/contributions/234125/>
L’Aquila, Italy 8 July - 12 July 2024
5. ***“Understanding the DAMA/LIBRA Signal Phase”***
8th COSINE Collaboration Meeting 2023
Daejeong, Korea 11 July - 14 July 2023
6. ***“Interpretation of modulating amplitude and phase from the DAMA/LIBRA analysis method”***
(Poster)
UCLA Dark Matter Conference 2023
<https://indico.global/event/647/contributions/16596/>
Los Angeles, CA 29 March - 1 April 2023
7. ***“Cosmogenic Activation of Radioisotopes in NaI(Tl) Detectors”***
APS April Meeting 2022
<https://meetings.aps.org/Meeting/APR22/Session/T08.3>
New York, NY 10-12 April 2022
8. *Magnetic Waves Excited by Newborn Pickup H⁺ Near Jupiter: Neutral Hydrogen Loss by the Planetary System*
Charles W. Smith *et al.* 2021, *Fall Meeting of the American Geophysical Union*
9. ***“Sorting neutron resonances by spin groups using a machine learning technique.”***
2020 Fall Meeting of the APS Division of Nuclear Physics, Abstract: GA.00006,
October 2020. (Online Poster)
10. ***“Realistic Uncertainty Determination of Nuclear Level Densities”*** (Poster)
Early Career Research Symposium
Brookhaven National Laboratory, November 2019
11. ***“Expansion Effects in Voyager Magnetic Field Spectra”***
Fall Meeting of the American Geophysical Union, Abstract SH23D-3364
Washington D.C. December 2018.
12. ***“Observations from 1-6 AU of Low-Frequency Magnetic Waves due to Newborn Interstellar Pickup Ions”***
Fall Meeting of the American Geophysical Union
San Francisco, CA December 2016.
